| Subject: | TESTS ON METALLIC COLOURS |
| Proposal of the “POWDERS” Working Group: | It has been found that the wording in the Specifications that “a metallic colour has to be tested unless the supplier states in writing that no metallic colour is produced for the system concerned” is obsolete since the published list mentions whether or not metallic colours are included in an approval. |
| QUALICOAT resolution: | Meeting held on 21 November 2007 <i>(ratified on 26 June 2008)</i> |
| Date of application: | July 2008 |
| Amendments to the Specifications: | Section 4.1.2 Tests for granting an approval Section 4.2 Renewal of approved systems |
| <p>4.1.2 Tests for granting an approval</p> <p>[...]</p> <p>For Classes 1 and 2, the following colours must be tested in triplicate:</p> <ul style="list-style-type: none"> - white RAL 9010 - blue RAL 5010 - red RAL 3005 <p>plus a metallic colour (see Appendix A4).</p> | |
| <p>4.2 Renewal of approved systems</p> <p>Consistent quality of approved systems is monitored annually with tests 1 to 15 (see section 4.1) being performed on two colours chosen from the three colours specified by QUALICOAT each year. One metallic colour (RAL 9006 or RAL 9007) must also be tested every year.</p> | |
